

Matt Finucane

Berlin, Germany | mattfinucane.com | linkedin.com/in/mattfinucane

PROFILE

Senior Full-Stack product and platform engineer with 20+ years of experience building scalable web applications across product-led environments.
Strong focus on React, TypeScript, and modern frontend architecture, with a track record for driving migrations, improving performance and delivering user-facing features at scale.
Known for pragmatic decision making, clear communication and taking ownership from concept to delivery.

CURRENT TECH STACK

Frontend	State & Data	Backend	Tooling & Infra	Testing
React, React Native	TanStack Query	Node.js	Docker	Vitest
TypeScript	Redux Toolkit	Fastify	CI/CD (CircleCI, GitHub Actions)	React Testing Library
Next.js	React Context	Express	Monorepos	Playwright

RELEVANT WORK EXPERIENCE

Raisin SE as Senior platform engineer, Berlin 08/2026 - present

- Developing shared platform capabilities that enable product teams to build, deploy and operate services efficiently
- Improving developer tooling and automated workflows to make software delivery faster, safer and more consistent
- Collaborating across engineering teams to strengthen the scalability, reliability and maintainability of Raisin's technology platform

Lokalise as Senior Full-Stack product engineer, Berlin 11/2024 - 07/2026

- Delivered user-facing features in a large-scale localisation platform, working across React frontend and Node.js services
- Owned development of an automatic contributor assignment feature, reducing manual setup and improving onboarding efficiency for localisation managers
- Built core workflow orchestration features to manage task lifecycles for translators, streamlining multi-step processes and reducing operational friction for end users

Travelport Digital as Senior Front-End product engineer, Dublin 01/2020 - 11/2024

- Migrated a large-scale corporate travel booking platform from AngularJS to React + TypeScript, modernising the frontend architecture and improving maintainability and developer velocity
- Led the upgrade of a legacy React Native application to the current version, resolving technical debt, enabling production releases and stabilising the mobile platform
- Reduced frontend bundle size to 25% of its original footprint, significantly improving load performance and user experience for the Deem travel platform

Mobility Trader GmbH as Senior Front-End product engineer, Berlin 01/2018 - 12/2019

- Joined an early-stage team and contributed to building a consumer marketplace and dealer platform for used car sales, delivering key features including a finance calculator and dealer portal
- Integrated Contentful as a CMS to support dynamic content (e.g. careers page), enabling non-technical teams to manage content independently
- Continuously improved frontend architecture by refactoring large components and migrating legacy styling from SASS to Styled Components, reducing technical debt and improving maintainability

Freelance Software Engineer, Berlin 12/2014 - 01/2018

- Delivered full-stack solutions for clients including StackPointCloud and ProfitBricks, building user interfaces for cloud infrastructure provisioning (compute, storage and network configuration)
- Developed community-driven knowledge base platforms (including Kubernetes-focused content portals) using PolymerJS, enabling user-generated content and self-service support
- Built backend services in Node.js and contributed to a Facebook-based chatbot platform, supporting automated responses and content delivery for a German TV station

Things I Like GmbH as Senior Full-Stack product engineer, Berlin 06/2014 - 12/2014

- Developed features for a Magento based e-commerce platform connecting independent designers with customers across Europe
- Implemented address validation and suggestion functionality, reducing checkout errors and improving delivery success rates
- Built a B2B vendor portal enabling suppliers to manage inventory, pricing and product listings directly

Axel Springer Ideas as Senior Front-End engineer, Berlin 10/2013 - 05/2014

- Built a TV guide interface (EPG) for web platforms, enabling users to browse channels and schedules in a set-top-box-like experience
- Contributed to the development of the company's public-facing website and authored promotional emails

iQContent Ltd as Senior Full-Stack product engineer, Dublin 03/2013 - 09/2013

- Built a customer-facing knowledge-based portal for a US telecommunications company (Danaher), delivering personalised content including documentation and other technical resources for engineers
- Developed features for a corporate intranet platform (Kerry Group PLC), enabling employees to access internal communications and self-service resources

Maithú IT Solutions as Technical Lead, Dublin 01/2012 - 03/2013

- Led the development of multiple mobile applications (iOS, Android and hybrid), including news platforms and content-driven apps, often working independently to deliver end-to-end solutions
- Built data-driven applications such as a medical guidelines app, transforming structured content into navigable mobile interfaces, and a social news aggregation platform

Earlier experience

- Senior Full-Stack product engineer, Paddy Power, Dublin, 2010 - 2012
- Freelance Software Engineer, Dublin, 2008 - 2010
- Full-Stack Engineer, Net-A-Porter, London, 2007 - 2008
- Full-Stack Engineer, FindMyPast, London, 2006 - 2007
- Associate Software Engineer, AOL, Dublin, 2005 - 2006

QUALIFICATIONS**BSc. in Computer Applications (Hons) - Dublin City University**

2001 - 2005

- Final year project: mobile 2D game (J2ME).
- INTRA placement (Alcatel, France): logging system for GSM cell towers
